Add Time Controlled Alert Tones and Emergency Tones to Your Paging System

Viking's model CTG-1 is a clock controlled tone generator designed to provide accurately timed bong alert tones or buzzer alert tone sounds over an existing paging system.

The CTG-1 can be programmed to output single, double or triple alert tones with up to 128 events in a 24 hour period. These bong/buzzer sounds are ideal for indicating the start and end of shifts, break times, lunch periods, etc. for factories, schools, or any business requiring an audible indication of specified times. Each day of the week can be programmed to either on or off, allowing you to turn off the alert tones during specific days of the week (weekends, etc.)

The CTG-1 has three contact closure inputs for triggering an emergency siren, evacuation signal or a doorbell sound.

Applications

• Signal the beginning and end of class periods, breaks, and lunch periods for schools
• Signal the beginning and end of shifts, breaks, and lunch periods for factories and other businesses
• Provides a doorbell and/or alarm sounds over an existing paging system, for such applications as door entry, fire, severe weather, etc.
• Use with Viking's DVA-2WA to provide timed messages (Fax Back Document 110)

Features

• Accurate 24 hour digital time clock displays hours and minutes
• User programmable 24 hour, 128 event timer
• Programmable day of week on/off feature
• Programmable single, double or triple alert tone output (selectable bong or buzzer)
• Three contact closure controlled sounds:
  1) Emergency siren (yelp) sound
  2) Temporal (slow whoop) evacuation signal
  *NFPA/ANSI compliant when used with supporting equipment
  3) Doorbell (chime) sound
• Volume controllable, 600 ohm line level audio output
• Non-volatile programming memory
• Battery backup for maintaining clock time with factory installed 9V NiMh rechargeable battery
• Two sets of DPDT relay contacts for muting paging or background music during alert tones

Specifications

Power: 120V AC/13.8V AC 1.25A UL listed adapter provided
Dimensions: 133mm x 91mm x 44mm (5.25” x 3.6” x 1.75”)
Weight: 0.9 Kg (2 lbs)
Environmental: 0°C to 32°C (32°F to 90°F) with 5% to 95% non-condensing humidity
Connections: 12 position cage clamp terminal strip
Battery Backup: 9V NiMh rechargeable battery (factory installed) maintains clock time for over 8 hours
Time Base: 60Hz AC power line
Time Base Battery Backup Accuracy: +/- 50 ppm
Audio Output: 600 ohm with volume adjust potentiometer, maximum level = 17 dBm/5.4Vrms across 600 ohm load
Relay Output: DPDT rated 125V AC, 30 W (resistive load)
**Features Overview**

**Mode Button:** Press to place the CTG-1 in the Lock, Set Time, Set Day, Set Events or Review/Cancel modes.

**Clock and Event Time Setting Buttons:** Press the + or -/CANCEL buttons to increase or decrease time. The -/CANCEL switch is also used to cancel an alert tone event when reviewing programming.

**Alert Tones Programming Buttons:** After setting an event time, press SINGLE, DOUBLE or TRIPLE to program 1, 2 or 3 alert bongs/buzzer sounds for that event time.

**Secondary Button Functions While in the SET DAY Mode:** The SINGLE button is used to select between day (1-7) or on/off. The DOUBLE button is used as a one time setup to program today's day of the week.

**9V Battery Backup Connection:** A standard rechargeable (NiMh) 9V battery is installed to maintain the clock time during power outages.

**CTG-1 Output Volume Control:** Turn clockwise to increase volume of alert bongs/buzzer sounds, emergency and door bell (chime) sounds (see diagram below).

*Note:* When the buzzer alert tone is programmed, a double or triple programmed event will be sounded twice, approximately three seconds apart.

**Display:** Shows clock, event time and mode settings.

**DIP Switches:** See Programming section J.

**Installation**

Connect the CTG-1 between your phone system and your paging amplifier as shown in the diagram below. The factory installed rechargeable 9V battery will maintain the clock time for over 8 hours.

**IMPORTANT:** The CTG-1 leaves the factory with the battery backup DIP switch turned OFF to avoid discharging the battery during shipment. The battery backup DIP switch MUST be set to ON (see Programming section J) to maintain clock time during a power outage.

**PA-2A Paging/Loud Ringing Amplifier System**

** Wet Contact Closures from Alarm Equipment, Doorbell Switch, Etc.**

*Note:* When the buzzer alert tone is programmed, a double or triple programmed event will be sounded twice, approximately three seconds apart.
Programming

A. Setting the Clock Time
1. Press the MODE button repeatedly until the SET TIME indicator lights.
2. Increase or decrease the clock time by pressing the + or -/CANCEL button until the desired time is displayed.
3. Leave the set time mode by pressing the MODE button.

Note: Either the + or -/CANCEL button MUST be pressed at least once prior to leaving the set time mode. The clock will then start to run the moment you leave the set time mode, allowing you to synchronize the CTG-1 with your building clocks.

B. Setting the Day of the Week
Note: This step is only required if you want to turn off the Alert Tones on certain days of the week.
1. Press the MODE button repeatedly until the SET DAY indicator lights.
2. A flashing “A” indicates all 7 days of the week are “on” and today’s day has not been set. The day of the week has already been set if a flashing number (1-7) and “on” or “of” are displayed.
3. Select today’s day of the week using the TIME (+ and -/CANCEL) buttons. As a general rule, Sunday is day 1 and Saturday is day 7. When today’s day of the week is flashing on the display, set it by pressing the DOUBLE alert tone button. Today’s day number and “on” will now be displayed.

Note: The day of the week setting and turning the alert tones off on specific days of the week is a one time set up and does not need to be reset unless you have experienced a brown out long enough to discharge the 9V battery backup (approximately 8 hours). To reset the day of the week and turn off tones on specific days of the week, you must power down the CTG-1, set DIP switch 1 to OFF, power up the CTG-1 and repeat steps 1-3 above. If you had alert tones turned off on specific days of the week, repeat steps 1-4 in section C below. When finished, set DIP switch 1 back to ON.

C. Turning the Alert Tones On/Off for Specific Days of the Week
1. Press the MODE button repeatedly until the SET DAY indicator lights. The current day of the week and “on” or “of” will be displayed. “on” = alert tones are ON and “of” = alert tones are OFF for that day of the week.
2. Pressing the SINGLE button will toggle between flashing the day of the week and flashing “on” or “of”. The flashing portion of the display is the section that can be changed.
3. With the day of the week flashing, use the TIME (+ and -/CANCEL) buttons to select the day of the week you would like to set to ON or OFF. When the correct day of the week is displayed, press the SINGLE button to flash “on” or “of”. The day can then be set to ON or OFF by using the TIME (+ and -/CANCEL) buttons.
4. Review your day of the week programming by pressing the SINGLE button until the weekday (1-7) is flashing, then increment through each day of the week with the TIME (+) button and monitor each day for its on or off setting. Exit the SET DAY mode by simply pressing the MODE button.

D. Setting Timed Alert Tones
1. Press the MODE button repeatedly until the SET EVENTS indicator lights.
2. Increase or decrease the event time by pressing the TIME (+ or -/CANCEL) button until the desired time is shown.
3. Move DIP switch 2 to OFF for bong alert tones or ON for buzzer alert tones (see Programming section J).
4. Press one of the single, double, or triple ALERT TONES buttons to program the number of alert tones you wish to output at the specific event time. A single, double, or triple confirmation beep should be heard.
5. Repeat steps 2-4 for the remainder of your scheduled events.

Note: If more than 128 events have been entered, a long beep will be heard indicating that the event memory is full.

E. Reviewing and/or Cancelling Timed Alert Tones
1. Press the MODE button repeatedly until the REVIEW/CANCEL indicator lights.
2. Press one of the ALERT TONES buttons (single, double, or triple) repeatedly to rotate through the event times associated with that alert tone button. A red LED at the bottom right corner of the time display will light to indicate a buzzer event time (versus a bong event).

Note: Event times are stored in the order of programming, not chronologically.
3. Press the -/CANCEL button to permanently cancel an event tone. A single acknowledgement tone will be heard. The next consecutive event for that specific alert tone will then be displayed.
4. Repeat steps 2-3 as needed to remove the events to be cancelled.
5. When all events for a given alert tone have been cancelled, the display shows three dashes (- - -).

F. Adjusting Output Volume
1. Short pins 9 and 12 together momentarily. The doorbell sound will then chime once.
2. Adjust the volume control potentiometer (see Installation).
3. Repeat steps 1-2 until the desired volume is achieved.

G. Activating Contact Closure Alarm Tones
To activate different sounds, short the corresponding pins with a dry contact closure as shown right (see Installation, section A). Note: The evacuation sound and siren will be repeated continuously, as long as the closures are maintained.

H. Locking the CTG-1 for Operation
When finished programming, press the MODE button until the LOCK indicator lights. In the lock mode, the time and alert tone keys will be disabled and the current time will be displayed with the colon flashing once per second.

I. Clearing the Alert Tone Memory
Turn DIP switch 1 OFF. Unplug the CTG-1 from power. Pause a few seconds and then plug the CTG-1 back in. Push the CANCEL and SINGLE buttons at the same time and release them. Repeat, and after releasing the buttons the second time a long beep will be heard indicating that the CTG-1’s memory has been cleared. Turn DIP switch 1 back ON to enable battery backup. Note: After completing this procedure, it will be necessary to reset the clock time (see Programming section A), and if enabled, the day of the week (see Programming section B) and alert tones on/off (see Programming section C).

Operation

When the clock time matches an event time and that day is set to “ON” or “A”, the CTG-1 will output the corresponding single, double or triple bong or buzzer alert tone. The CTG-1 will also open terminals 3 and 4 (normally closed) and close terminals 4 and 5 (normally open), allowing the capability of switching out the audio from the phone system and switching in the alert tone from the CTG-1. Similarly, while a contact closure is made shorting pins 9, 10 or 11 to pin 12, the CTG-1 will output the corresponding sound (doorbell, evacuation signal or emergency siren). In the case of the siren or evacuation signal, terminals 3 and 4 will open, and terminals 4 and 5 will close and the sound will continue for the duration of the contact closure input. Terminals 3, 4 and 5 will return to their normal states at the end of each doorbell tone. Note: Terminals 6, 7 and 8 will operate the same as terminals 3, 4 and 5 but are electronically isolated from terminals 3, 4 and 5 for switching a separate device.

IMPORTANT: While operating, the CTG-1 continuously checks the event time information stored in memory. If a problem is detected, the CTG-1 displays “EEE” to indicate an error. Normal clock function continues in the background. To clear the error, press any button and the CTG-1 will return to normal operation. If the “EEE” display persists, contact Viking Technical Support at 715-386-8666.
